

Working with Encrypted Data

In ODK Aggregate

Overview Downloads Documentation Community Technologies Training

Java SE Runtime Environment 8 Downloads

Do you want to run Java™ programs, or do you want to develop Java programs? If you want to run Java programs, but not develop them, download the Java Runtime Environment, or JRE™.

If you want to develop applications for Java, download the Java Development Kit, or JDK™. The JDK includes the JRE, so you do not have to download both separately.

Download Java and Cryptography Extensions

- <http://www.oracle.com/technetwork/java/javase/downloads/jre8-downloads-2133155.html>
- Click accept "Accept License Agreement"
- Download version for your operating system
- Version 8u172 is recommended

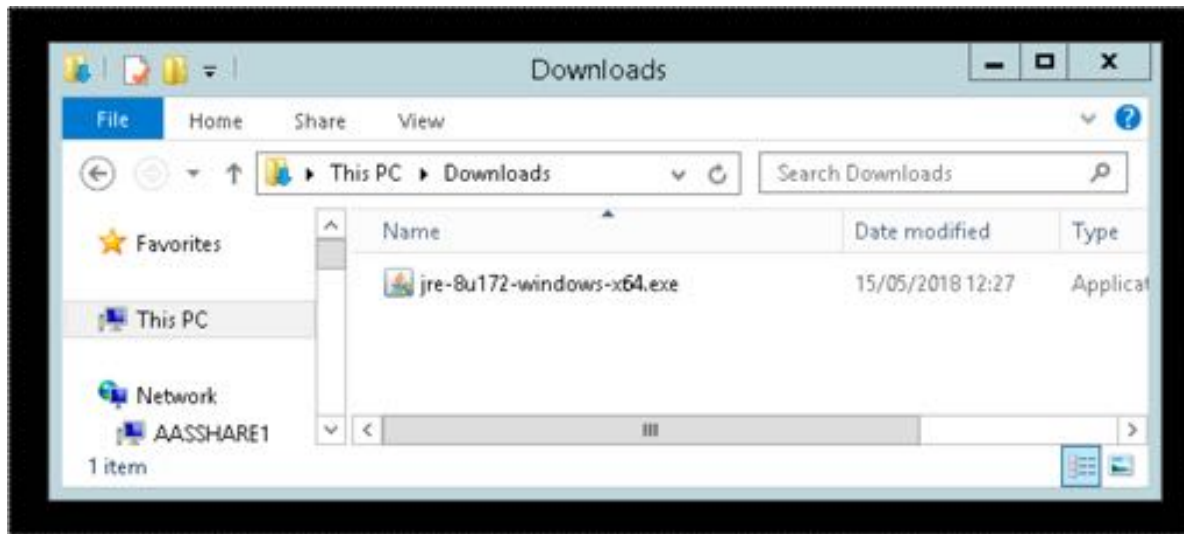

Most Mac Users need this file

Most PC Users need this file

Install Java and Cryptography extensions

Go to the directory where the file was downloaded, double click the file and follow the instructions to install Java

You will need an administrator password to complete this step. For managed PCs seek assistance from your IT partner

Obtain a pair of encryption keys

- You can create a pair of keys for encryption using the open source openssl software
 - <https://www.openssl.org>
- We can also provide keys and will keep a copy of your keys in our locked safe.
- Email odk@lshtm.ac.uk
- We will send you a pair of asymmetric encryption keys
- The Public Key is used for encryption and is included in your ODK forms
- The Private Key is used for decryption
 - It should be kept on a USB thumb drive in a locked room, safe or filing cabinet.

Copy the public key in to your ODK form

- The Public Key is a text file that looks something like this if you open it in textedit or similar
- To use the public key with ODK, you first need to remove the line breaks in this file to get the key on one line
- Copy the single-line version of the key to your clipboard

```
-----BEGIN PUBLIC KEY-----
MIIBIjANBgkqhkiG9w0BAQEFAAOCAQ8AMIIBCgKCAQEA1DXk7dbAI89DscB5M+aB
lbvtIUcelkwdYX+CBV9uHdvkCm6g0CJM0nrzjRrhKyty0hSgIRfhIBozIfEJYSwR

XAnPEK2BdNI/ltfPhgK0CE1inXAZxIrDSybePUIyYbIj14aQ30osMpp4EMFFU1rY
bQIDAQAB
-----END PUBLIC KEY-----
```

```
-----BEGIN PUBLIC KEY-----
MIIBIjANBgkqhkiG9w0BAQEFAAOCAQ8AMIIBCgKCAQEA1DXk7dbAI89DscB5M+aBlbvtIUcelkwdYX+CBV9uHdvkCm6g0CJM0nrzjRrhKyty0hSgIRfhIBozIfEJYSwRusz/ClGeNiL8Fz3JGYfnFWLw4ZmNKQwA:
-----END PUBLIC KEY-----
```

Copy the public key in to your ODK form

- Paste the single-line version of the key in to your ODK form Excel file
- The key needs to go on a tab called 'settings' and in a column called 'public_key'
- Both names are case sensitive and should be lower case.

The screenshot shows an Excel spreadsheet with the following structure:

	A	B	C	D
1	form_title	form_id	public_key	
2			MIIBJANBgkqhkiG9w0BAQEFAAOCAQ8AMIIBCgKCAQEAlDXX7dbAI89DscB5M+aB1bvtIUcelkwdYX+CBV9uHdvkCm6gDCJM0nrzRrhK...	
3				
4				
5				
6				
7				
8				
9				
10				
11				

Annotations:

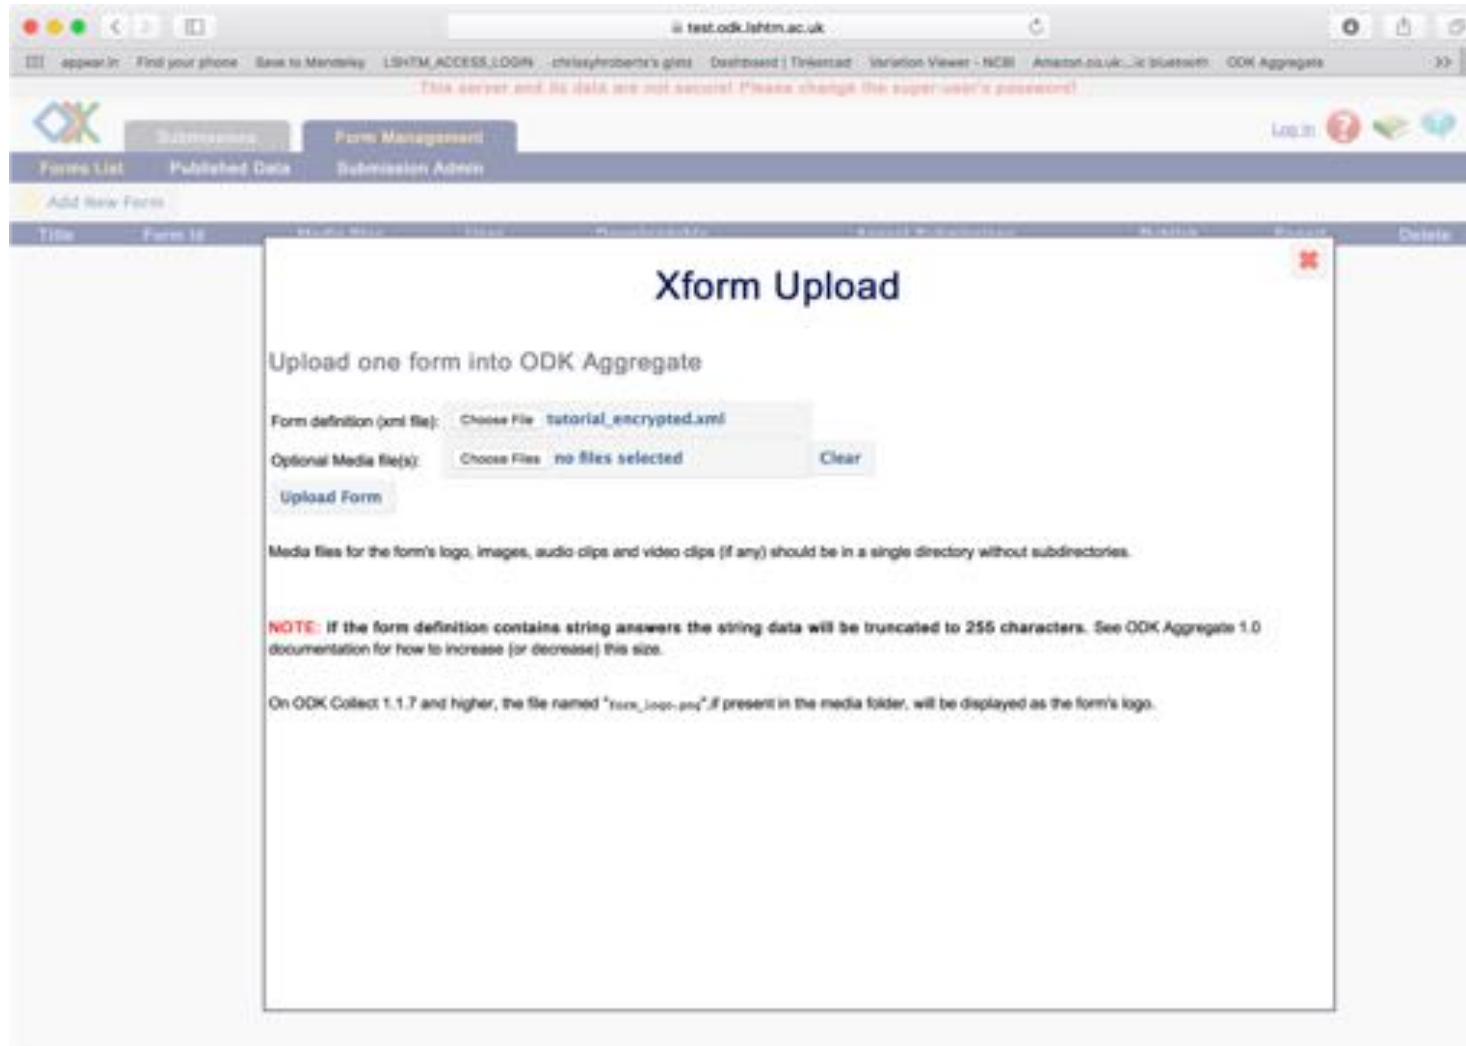

- 'public_key' column: Points to the column header 'public_key' in cell C1.
- 'settings' tab: Points to the 'settings' tab in the bottom sheet navigation bar.
- Public key: Points to the long alphanumeric string pasted into cell C2.

Convert your form to XML

- Use ODK XLSForm Offline, available here : <https://github.com/opendatakit/xlsform-offline/releases>

Upload the XML file to your server

The screenshot shows a web browser window with the URL `test.odk.lshm.ac.uk`. The browser's address bar contains several tabs, including "ODK Aggregate". A warning message at the top of the page reads: "This server and its data are not secure! Please change the super user's password!". The main navigation bar includes "Forms List", "Published Data", and "Submission Admin". Below this, there is a section for "Add New Forms" with a table header containing columns for "Title", "Form ID", "Form Name", "Form", "Form Description", "Form Version", "Form Status", "Form Date", and "Delete".

Xform Upload

Upload one form into ODK Aggregate

Form definition (xml file):

Optional Media file(s):

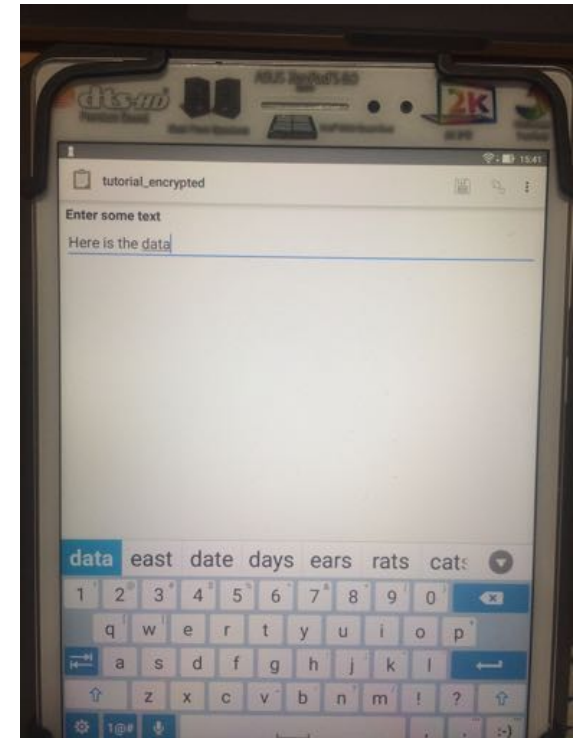

Media files for the form's logo, images, audio clips and video clips (if any) should be in a single directory without subdirectories.

NOTE: If the form definition contains string answers the string data will be truncated to 255 characters. See ODK Aggregate 1.0 documentation for how to increase (or decrease) this size.

On ODK Collect 1.1.7 and higher, the file named "form_logo.png" if present in the media folder, will be displayed as the form's logo.

Connect your Android device to the server

Get the blank form from the server, then fill and submit a test form

The data in the submissions view is now encrypted

The screenshot shows a web browser window with the URL `test.odk.lshfm.ac.uk`. A red warning banner at the top reads: "This server and its data are not secure! Please change the super-user's password!". The application interface includes a navigation bar with "Submissions", "Form Management", and "Site Admin" buttons. Below this, there are tabs for "Filter Submissions" and "Exported Submissions". The main content area displays a form titled "tutorial_encrypted" with a "Filter" set to "none". On the left, there are controls for "Save", "Save As", "Delete", "Submissions per page" (set to 100), "Filters Applied", "Add Filter", and "Display Metadata". The main data table has a header row with "Previous", "tutorial_encrypted", and "Next" buttons. The first row of data contains a long, redacted string of characters: `AplEcy6OcbZ3coZNgY3RishKCAZEhweQhL YTax1kqARpGHjw11NEJw5cU0RrcZYyyaq2NauEUHQtbU+0b7E1fpNpAQHsFdySbCoZPlojU3pPxiUQidfuOvO0TXC70`. A blue arrow points from the text "Here is the encrypted data" to this redacted string.

Here is the encrypted data

Download ODK Briefcase

<https://opendatakit.org/download/4476/>

Copy the "ODK Briefcase vx.x.x Production.jar" file to a folder on your hard drive

Double click to open the ODK Briefcase Software.

You may have to allow security privileges on some computers.

On Mac OS you may need to go to "system preferences > security & privacy" then unlock the preference pane and click 'Anywhere' under the "Allow apps downloaded from" section.

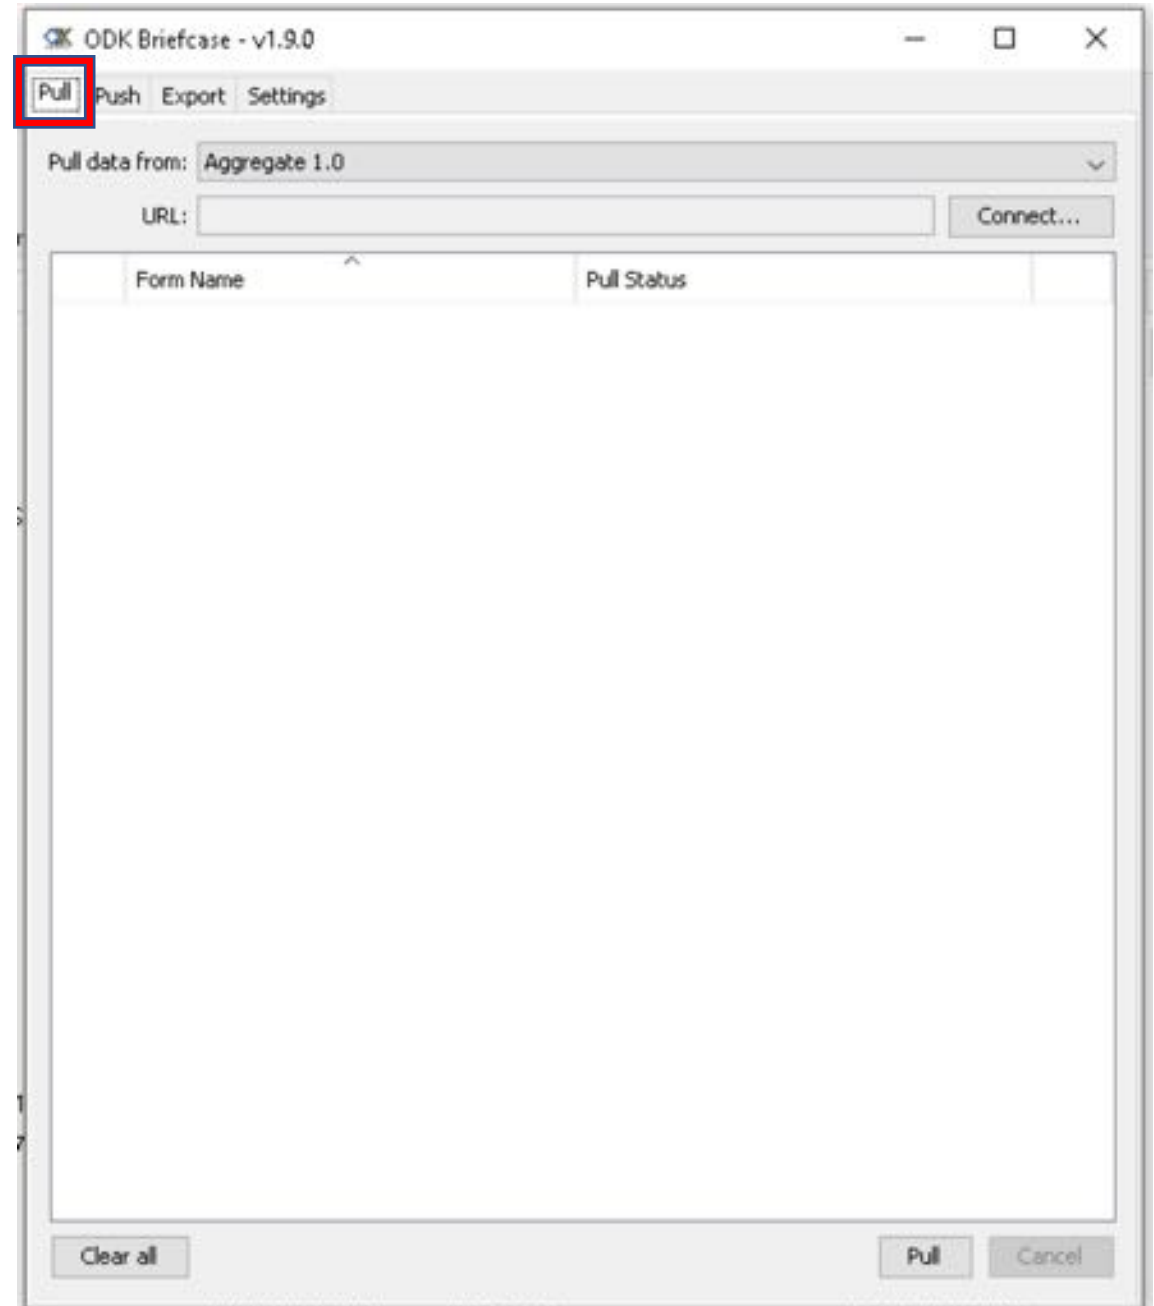

ODK Briefcase

Set the download folder

This is the folder in which all of your data will be saved and decrypted

It should not be a folder on a filesharing system such as Dropbox, nor a folder which is automatically backed up to an unsecured drive.

Connect to the ODK aggregate server

Click the 'connect' button

Connect to the ODK aggregate server

Change the url to match the location of your server

Enter the user name and password of an administrator account and press the 'Connect' button.

IMPORTANT

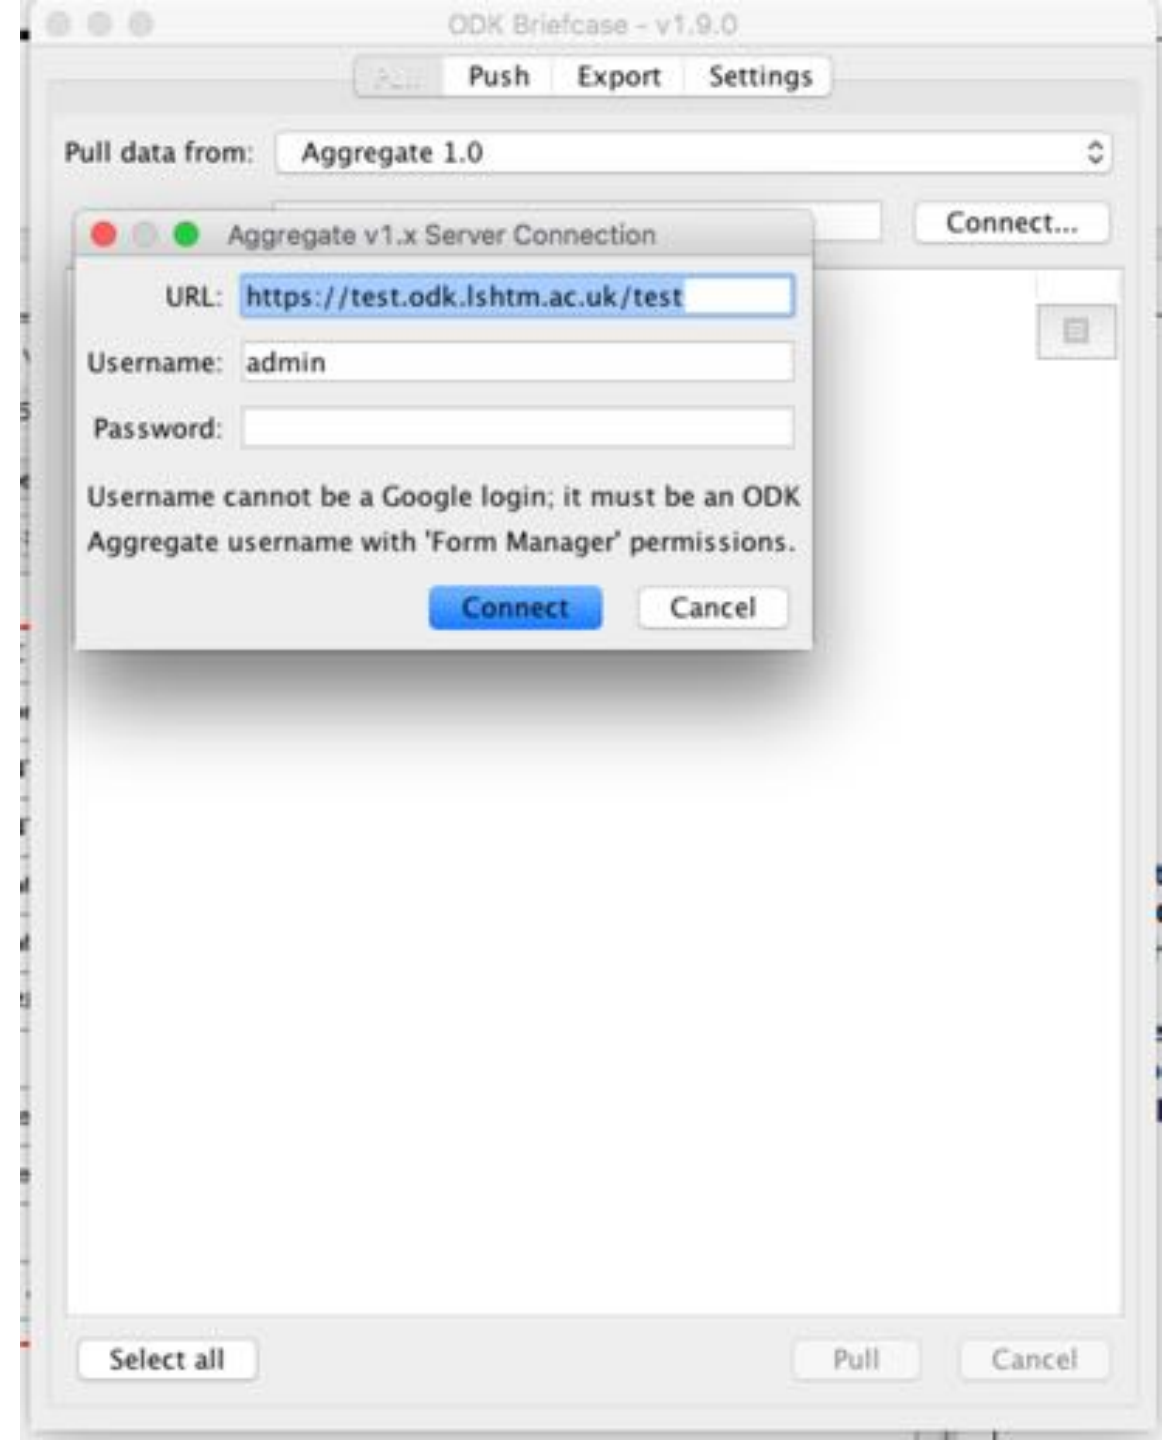

The URL needs to include the main folder for the data. This folder's name is the same as your server's name

i.e. if your url is

`https://test.odk.lshtm.ac.uk`

then the url you enter in ODK Briefcase should be

`https://test.odk.lshtm.ac.uk/test`

Pull data from the ODK aggregate server

ODK Briefcase will now list all the forms that you can copy from the server on to your machine. This action is called a 'pull'.

Tick the box next to the forms you want to pull or press the 'select all' button

Press the 'Pull' button to pull your data in to the folder you specified earlier.

Pull data from the ODK aggregate server

All successful pulls will be flagged 'success' in the "Pull Status" column.

In your download folder you will now find this directory structure

There will be one uuid folder for each form you submitted to the server.

Inside each of these folders you will find encrypted files

Download Folder

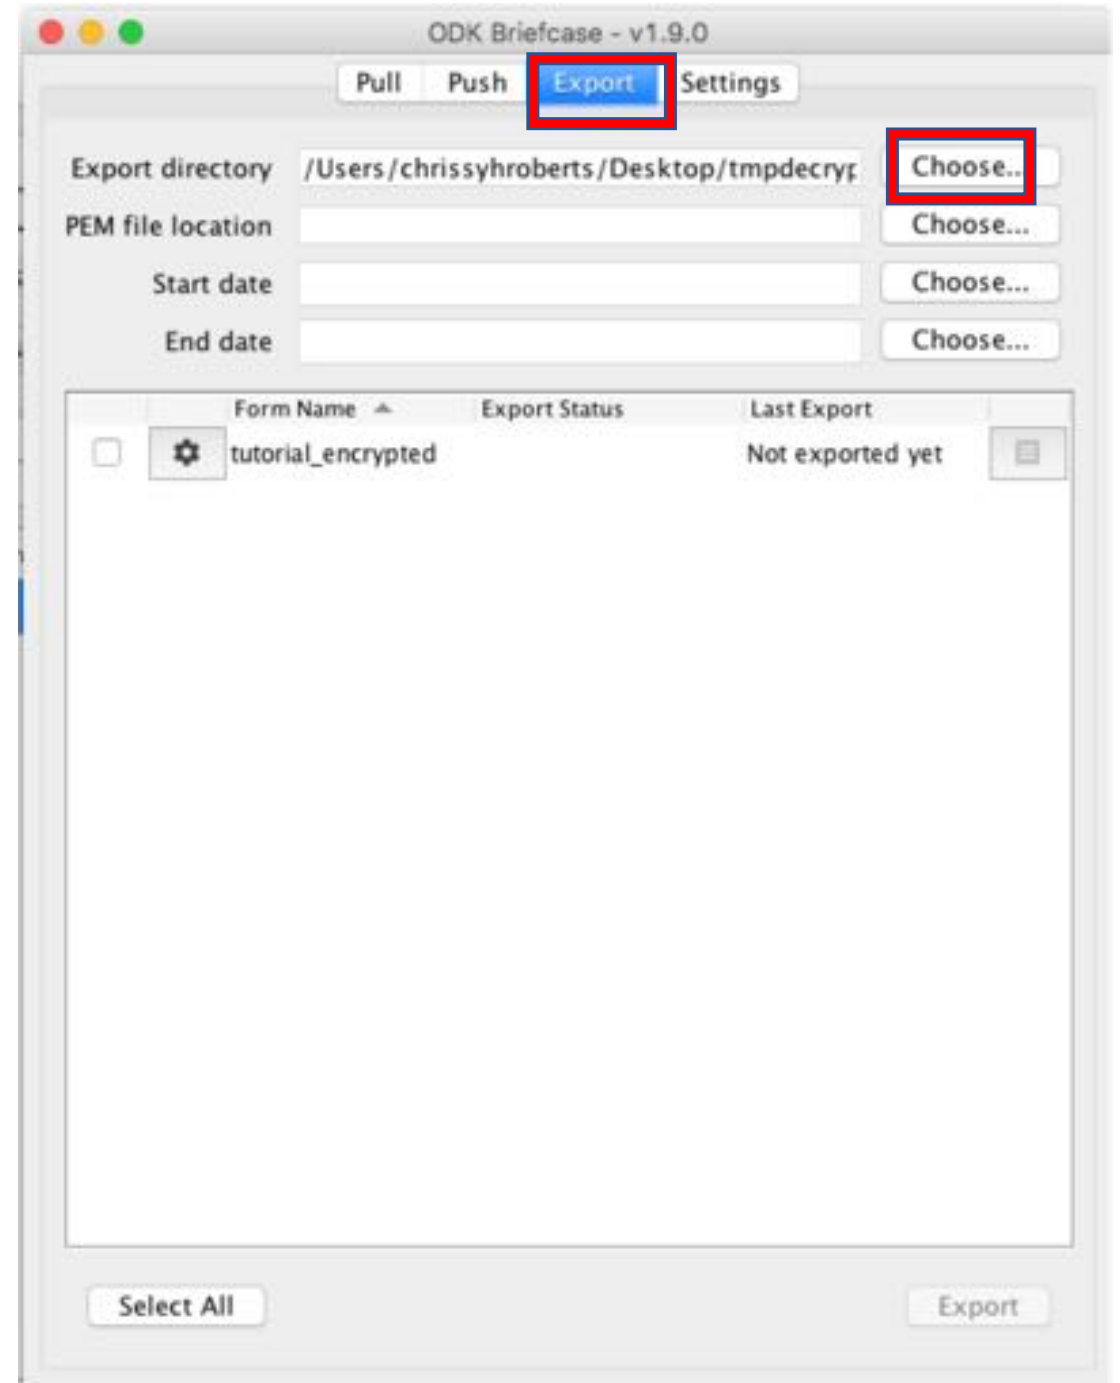

- > ODK Briefcase Storage
 - >forms
 - >tutorial_encrypted
 - >instances
 - >uuid....

Export and decrypt the data from Briefcase

Click the 'export' tab

Click the 'choose' button next to "Export Directory" and choose a directory in which to export the decrypted data

This folder should not be on Dropbox etc., nor on folder backed up to encrypted media.

Select the location of the private key

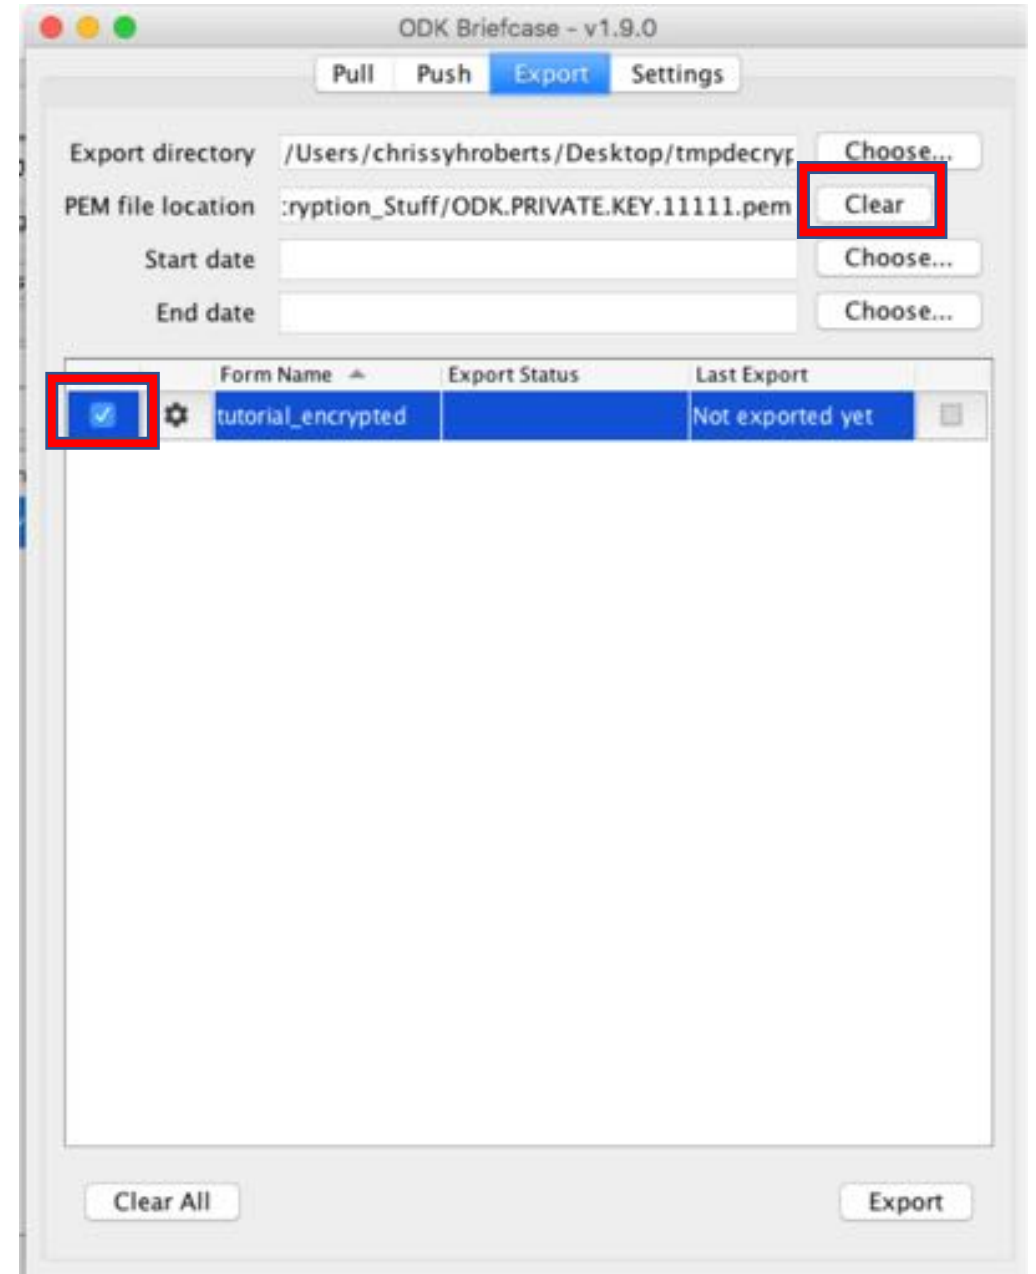

Click the 'export' tab

Click the 'choose' button next to "PEM File location"

Find the private decryption key

Select the forms you wish to decrypt

Press 'Export'

Export and decrypt the data from Briefcase

Export Status will change to 'Succeeded' if everything went well.

Export and decrypt the data from Briefcase

In the export directory you will find a new folder called 'decrypted'

Inside should be a csv file, which can be opened by R, STATA, Excel or text editors.

If there are photos, videos or sound recordings in your form, there will be a 'media' folder which contains these. The file paths to these media files will be updated automatically in the CSV document.

A screenshot of the Microsoft Excel application. The title bar shows the file name 'tutorial_er'. The ribbon is set to 'Home'. The spreadsheet contains a table with the following data:

	A	B	C	D	E	F
1	SubmissionDate	text	data	meta-instanceID	KEY	isValidated
2	15 May 2018, 15:40:04		Here is the data	uuid:ccf3b884-96fc-4820-b49d-724021d629e4	uuid:ccf3b88	TRUE
